MiGBC MICHIGAN GREEN BUILDING COLLABORATIVE

Energy Benchmarking Service

Taking the hassle out of energy benchmarking with a low-cost fee-for-service model.

Benefits

Initial Baseline
Sets historical energy performance foundation.

Semi-Annual Uploads
Keeps energy data current with regular updates.

Annual Scorecard
A summary of key metrics, annual changes, and resources.

Set & Track Goals
Monitor progress and establish targets with confidence.

Energy Data Made Easy

Our low-cost benchmarking service takes all the heavy lifting off your plate. MiGBC collects your energy data, uploads it directly into a central dashboard, and delivers clear annual performance metrics. All that is needed from you is basic building details and utility account information. MiGBC handles everything else.

Why Enroll in this low-cost Service?

- Easily stay current with energy data
- Identify anomalies and runaway buildings
- Find savings opportunities
- Use real data for project savings estimates
- Prioritize projects
- Support MiGBC and its efforts!

What is Energy Benchmarking?

MiGBC
MICHIGAN GREEN BUILDING COLLABORATIVE

Energy benchmarking is a process that measures and compares a single building's energy use to similar buildings, its past performance, or a reference level.

Energy benchmarking tracks all fuel coming into your building, such as natural gas, steam, electricity, etc.

It can help identify how efficient a building is and where to make energy improvements.

Why Benchmark Energy Use?

- Establish a Baseline
- Track Progress
- Identify & Prioritize Projects
- Improve Occupant Comfort
- Get Recognized
- Reduce Energy Costs
